Python Backend Developer

Backend engineer with hands-on 8+ years experience across three major Python frameworks: primarily FastAPI, with practical experience in Django and Flask.

Experienced in building and refactoring backend systems, working with both new and existing applications, microservice architectures, CQRS, REST APIs, asynchronous processing, integrations, and database-driven applications.

Worked with relational databases, MongoDB as both a primary data store and an external read layer in CQRS setups, Elasticsearch for search, and Redis for caching. Practical experience with message queues, Docker, Kubernetes, Nginx, and S3-compatible storage.

Skills

Languages:
Python, JavaScript

Frameworks & Backend:
FastAPI, Django, Flask, DDD, WebSocket, REST API, gRPC, SQLAlchemy, Pytest

Databases & Search:
PostgreSQL, MySQL, MariaDB, MongoDB, Elasticsearch, Redis

Messaging & Processing:
RabbitMQ, Apache Kafka, Celery, Airflow

Infrastructure & Tools:
Docker, Kubernetes, Nginx, Grafana, Prometheus, Loki, S3, Git, GitLab CI/CD, Linux

Frontend:
React, JavaScript, HTML, CSS

Education

Moscow Engineering Physics Institute
Faculty of Automatic and Electronic

Experience

Python Developer — Media-Nest

2016–2020

- Worked on the company's main websites.
- Developed and refactored backend applications using Python, Flask, and Django.
- Introduced NoSQL databases, CQRS, and microservice architecture in backend systems.

Python Developer — Media Enterprize

2020–2022

- Developed and optimized backend applications using Flask and Django.
- Used multiprocessing and asynchronous approaches for performance improvements.
- Implemented CQRS by moving frequently accessed pages to a separate MongoDB-based read layer.

Python Developer — Blue Dynamics

2022–2023

- Developed a microservice-based "smart" warehouse system using FastAPI, Redis, and Celery.
- Connected services using gRPC.
- Worked in collaboration with the ML team.

Python Developer — WHOIX Ltd

2023–2025

- Developed and refactored backend services using Python FastAPI.
- Integrated payment systems including Stripe, PayPal, WebMoney, and Cryptomus.
- Built a web service for crypto-asset verification, integrating third-party APIs and processing and validating data through REST interfaces using JSON and XML.
- Developed backend functionality for a mobile application with in-app payments through Apple Pay and Google Play Billing.

Python Developer — DChat

2025–Present

- Built a B2B multi-channel messaging platform with Telegram, WhatsApp, and CRM integrations.
- Built the project as the sole engineer, covering architecture, backend development, testing, and deployment.
- Developed the backend around FastAPI and integrated external messaging and CRM services.
